EDUCATION

Vellore Institute of Technology

B.Tech - Computer Science and Engineering(AIML)

2022 – 2026

CGPA: 8.41

EXPERIENCE

IndieToon Studio — AI Developer Intern

Nov 2025 - Jan 2026

- Collaborated with the founder and development team to build and deploy **AI-powered features** for a digital storytelling platform used by writers to create and refine their stories
- Developed an **AI-assisted writing workflow** using the **Google Gemini API** to improve grammar, sentence structure, clarity, and readability while preserving the original story context
- Built a **visual content generation workflow** that transformed story requirements into AI-generated images for use throughout published stories
- Worked closely with the development team to **test AI workflows, handle API responses and errors, and refine features** based on product requirements and user feedback

PROJECTS

AI-Powered Document Intelligence Assistant

Tech: Python, RAG, LangChain, OpenAI API, FAISS, Embeddings

- Developed a **Retrieval-Augmented Generation (RAG)** system for natural-language querying of private documents such as PDFs and Markdown files
- Built a document processing pipeline using **LangChain loaders** and Recursive Character Text Splitting to prepare documents for efficient retrieval
- Generated **text embeddings** and stored them in **FAISS** to perform semantic similarity search and retrieve relevant document context
- Integrated **OpenAI LLMs** to generate context-aware answers from retrieved document content and return relevant source documents with responses

Customer Churn Prediction System

Tech: Python, Pandas, Scikit-Learn, XGBoost, Matplotlib, Seaborn, SMOTE, Pickle

- Performed **Exploratory Data Analysis (EDA)** using Matplotlib and Seaborn to identify churn patterns and visualize customer feature distributions
- Preprocessed customer data using **data cleaning and Label Encoding**, and addressed class imbalance using **SMOTE** for balanced model training
- Trained and compared **Decision Tree, Random Forest, and XGBoost** classifiers using 5-fold cross-validation to evaluate model performance
- Developed a predictive system by serializing the final **Random Forest model and encoders** using Pickle for predictions on new, unseen customer data

SKILLS

Programming: Python, C++, SQL

Data & ML: NumPy, Pandas, Scikit-learn, XGBoost, Matplotlib, Seaborn

AI & GenAI: LLMs, RAG, LangChain, Embeddings, FAISS, Prompt Engineering

Backend & Tools: FastAPI, REST APIs, Pickle, Jupyter Notebook

Platforms: Git, GitHub, Firebase, Supabase

CERTIFICATIONS & ACHIEVEMENTS

- **Certification:** Machine Learning Specialization (Coursera)
- **Certification:** HTML, CSS, and JavaScript for Web Developers (Coursera)
- **Problem Solving:** Solved **250+** problems on GeeksforGeeks and LeetCode
- **Extracurricular Activity:** Vice President, Defence Warrior Squad Club, VIT Bhopal University
